Are all problems worth solving?

I'm going to challenge you to answer that question for yourself in an hour or less. In order to do this you'll follow the ADDIE process combined with cognitive Learning Outcomes. Understanding this method will allow you to flip your perspective and measure cognitive development more effectively.

I've architected a minimal viable product that articulates a learning path to efficiently solve problems called flip. The flip method is based on design principles from my Masters of Science in instructional systems technology as well as my experience in the fields of change management and digital product development.

I'll be using this method to show you how to change from a finite project mindset to an infinite product one. Project metrics and product metrics are similar but they are not the same, so we have to measure product lifecycle success differently.

This kindle version is a lighter, more consumable version than the yet to be released print book, Flip: An Evaluation Method.
